YellowScan and Argosdyne Announce Strategic Partnership for C2 Classified Drone LiDAR Solution

Montpellier, France – May 15th, 2025 - YellowScan, a global leader in UAV LiDAR solutions, and Argosdyne, a leading drone manufacturer, today announced a strategic partnership centered around the EasyMapper drone solutions, which have officially received the prestigious C2 Class certification from the European Union Aviation Safety Agency (EASA).

C2 Classification Achievement Marks Major Milestone

Both EasyMapper solutions (Easy Mapper-LS C2 and EasyMapper-LM C2), distinguished by its signature orange color, has been officially certified as C2 Class compliant (reference: EASA PR-318-AL-200F), a significant regulatory achievement that enables operations across the European Union under standardized drone regulations. This certification demonstrates the system's compliance with strict safety, performance, and operational standards, providing customers with assurance of regulatory compliance and operational reliability.

"This C2 classification represents a major milestone for our successful collaborative efforts with Argosdyne" said Teresa Hong, Senior Business Development Manager Asia-Pacific at YellowScan. "It opens substantial new opportunities across the European market while reinforcing our commitment to delivering solutions that meet the highest regulatory standards."

Strategic Business Model and Global Distribution

Under this partnership, YellowScan provides OEM versions of its renowned LiDAR technology to Argosdyne, which integrates them into their EasyMapper drone platform and sells the complete bundled solution to customers, dealers, and resellers worldwide. Argosdyne will deliver technical training and first-level support, while YellowScan provides second-level technical support to ensure comprehensive customer service.

Argosdyne is actively expanding its distribution network, with particular focus on the US market. The company has already secured local drone licenses for tender biddings in Malaysia and Thailand, and is working closely with dealers across the APAC region to deploy demonstration units of the EasyMapper solution.

Proven Field Performance

The EasyMapper solution has already demonstrated its capabilities through successful deployments in Korea, Malaysia, Hong Kong, and New Zealand. An upcoming demonstration is scheduled at the Japanese Users Meeting in Tokyo at the end of May, further expanding the solution's global footprint.

About Argosdyne

Argosdyne is a global leader in developing advanced drone systems and autonomous solutions. With over seven years of expertise in UAV technology, Argosdyne specializes in designing innovative aerial platforms for applications in infrastructure inspection, mapping, and environmental monitoring. The company's flagship drone, AQUILA-2, has achieved the prestigious European EASA C2 class certification, enabling safe operations even in complex and urban environments. By integrating cutting-edge technologies like high-precision LiDAR and AI-based navigation systems, Argosdyne continues to push the boundaries of what is possible with aerial data acquisition and automation.

About YellowScan

YellowScan designs, develops, and produces UAV LiDAR solutions for professional applications. Known for their accuracy, robustness, and ease of use, YellowScan's LiDAR systems are utilized in a range of industries, including forestry, mining, and topographic surveys..
